Troubleshooting Guide

- Ver 1.0-

This service hints is published for technicians and engineers for repair. And it gives you the information how to judge the defective board of PDP. In the future, we will improve the contents for more easy diagnostic and troubleshooting.

Please file and use this Service Hints together with the main service manual and other publications related to models.

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

5. Troubleshooting (3D model)

Relation of board and display area

<Display device block diagram>

Over 50 inch

A diagram of a 2D grid with dimensions and labels. The grid is divided into four quadrants by a horizontal dashed line and a vertical dashed line. The vertical axis is labeled with 'SU' for the top half and 'SD' for the bottom half, grouped by a bracket labeled 'SC' on the left. The horizontal axis is labeled with 'C1', 'C2', and 'C3' for the three columns, grouped by a bracket labeled 'A' at the bottom. The right side of the grid is labeled with 'SS' and '(all)' in a bracket. The bottom of the grid is labeled with '(RIGHT)' and '(LEFT)' in brackets, indicating the spatial orientation of the columns.

46 inch

Diagram illustrating the partitioning of a 2D array A into four quadrants:

- Columns:** $C1$ (RIGHT) and $C2$ (LEFT).
- Rows:** SU (Subproblem Upper) and SD (Subproblem Down).
- Quadrants:**
 - Top-Left: SU
 - Top-Right: SS (all)
 - Bottom-Left: SD
 - Bottom-Right: SC

42 inch

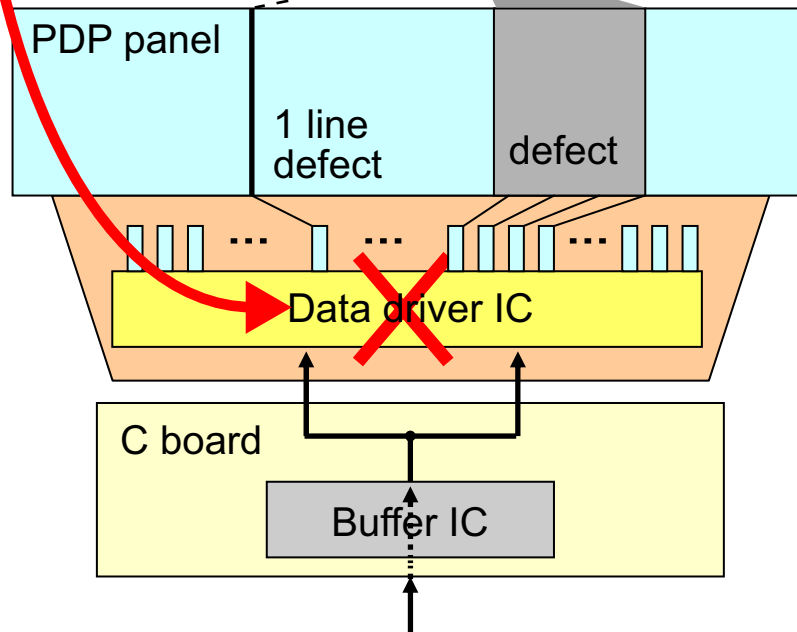

The diagram shows a light blue rectangular domain divided vertically by a dashed line. The left half is labeled 'C1' and '(RIGHT)', and the right half is labeled 'C2' and '(LEFT)'. The left vertical boundary is labeled 'SN', the right vertical boundary is labeled 'SS (all)', and the bottom horizontal boundary is labeled 'A'.

PDP panel defective (Data driver IC defective)

Width is narrower than FPC

Data driver IC defect= PDP panel defect

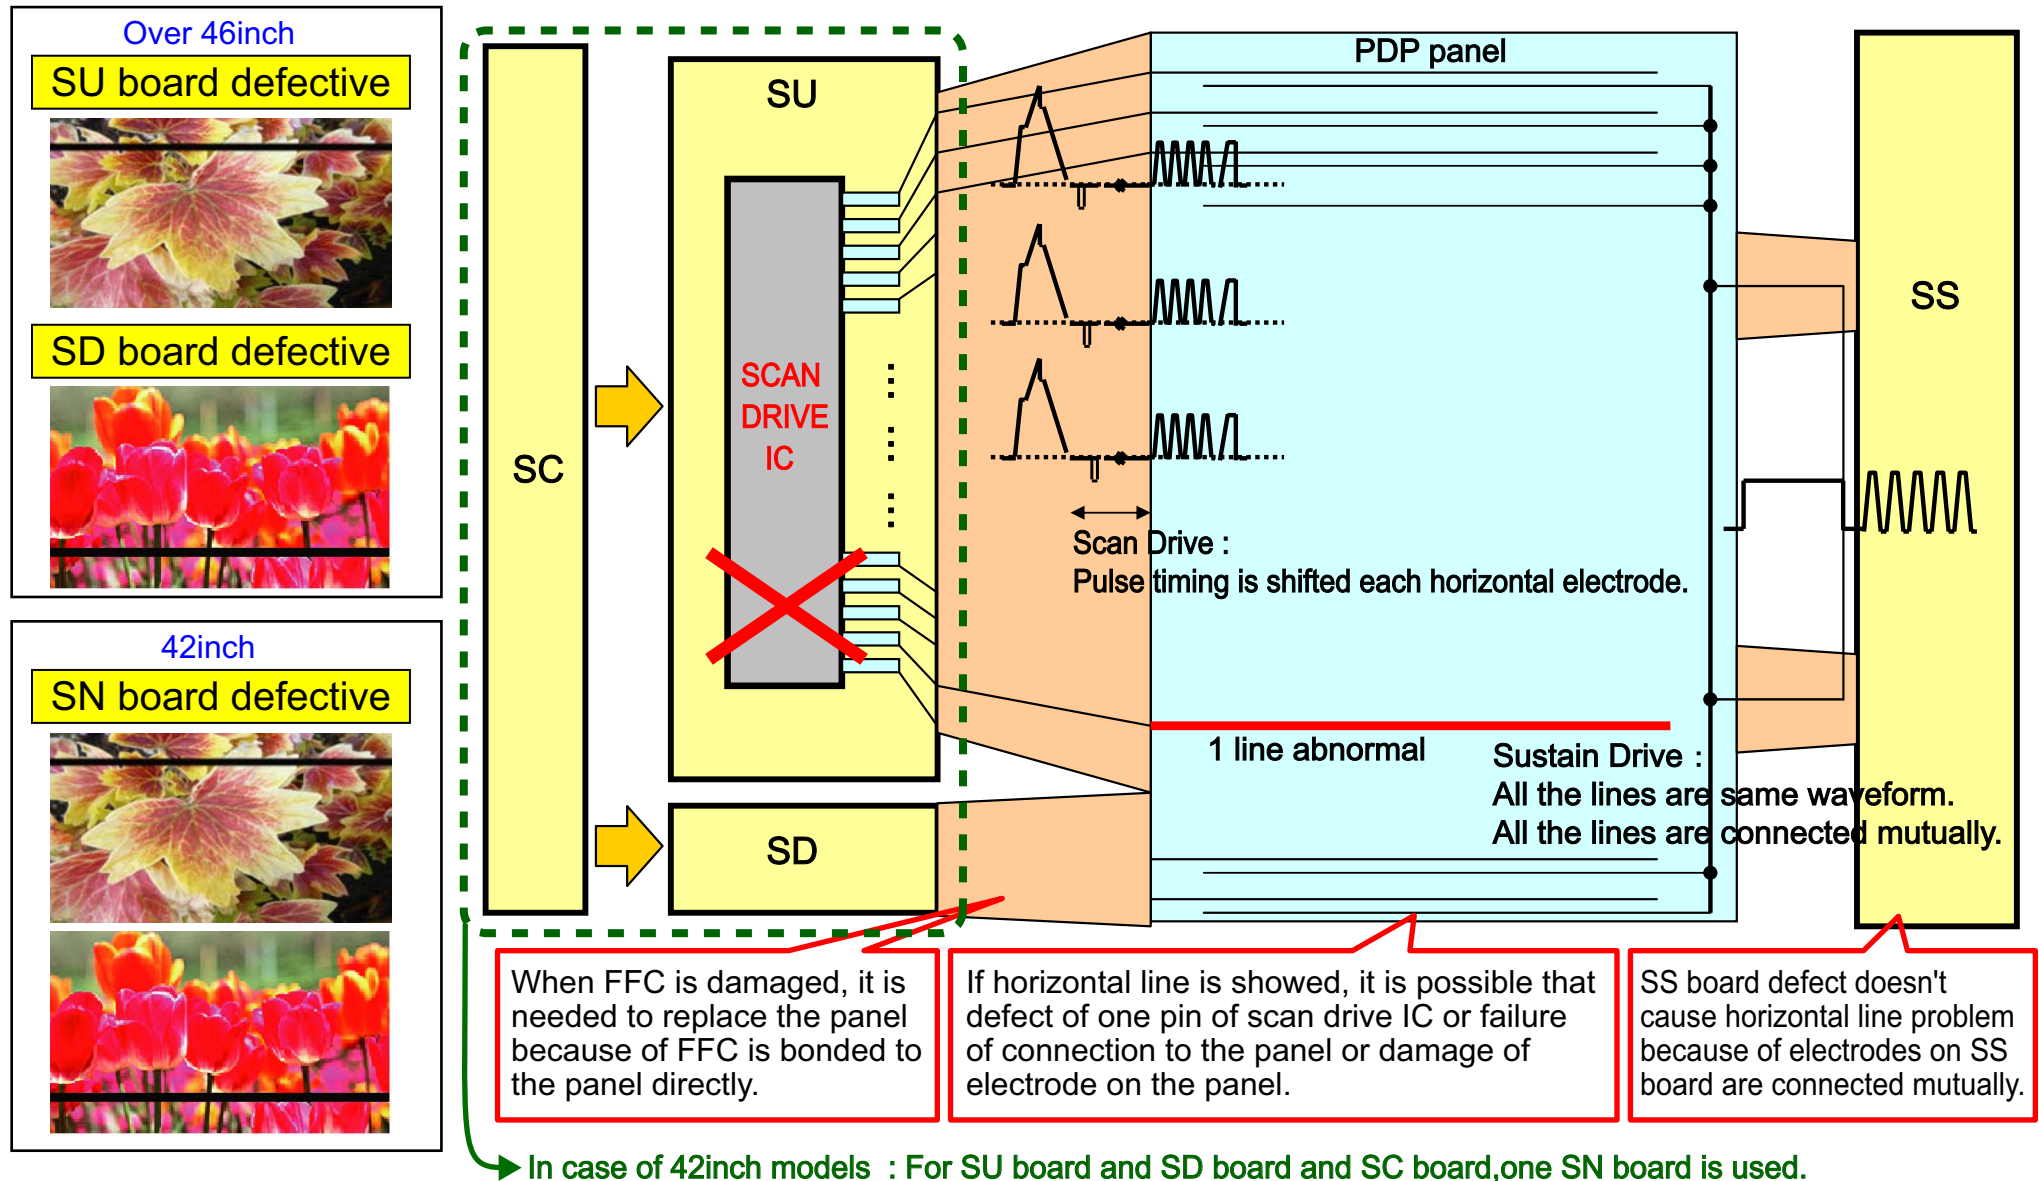

Data driver IC or C or A board defective

Width is same as FPC

5.Troubleshooting for picture trouble

Picture trouble [diagnosis of horizontal line]

5.Troubleshooting for picture trouble

Picture trouble [Function of diagnosis]

< Mirror function >

Mirror Function : Picture can be reversed left and right or up and down.

For vertical lines problems, this feature can help to determine if the problem is the A board or the panel.

If the position of the line/lines changes when performing this function, the A board is possibly defective.

The rear cover does not have to be removed to do this.

To enter the Mirror Function.

From the Service Mode Menu, Press 1 or 2 to select "OPTION".

Press 3 or 4 to select "MIRROR".

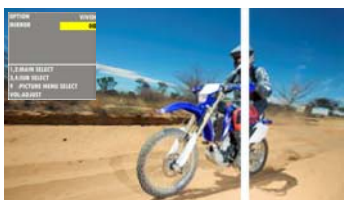

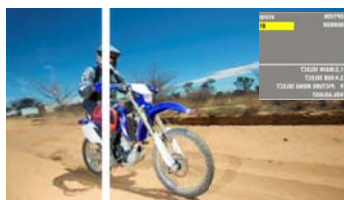

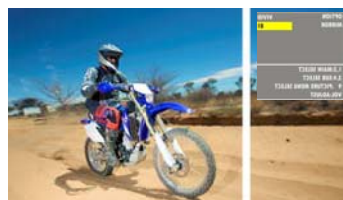

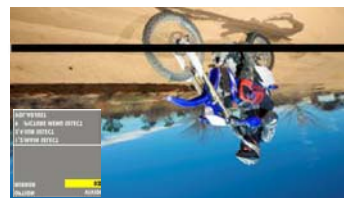

Press the VOLUME up or down button to change the Mirror's data.

Data = 00 Default data (Mirror function is off).

Data = 01 Picture is reversed left and right.

Data = 02 Picture is reversed up and down.

<How to diagnose by using "Mirror function">

	Data : 00	Data : 01	
		the picture & line : reverse	only the picture : reverse
			
Vertical Line		Defective Block : A board	Defective Block : Panel or C board
	Data : 00	Data : 02	
		the picture & line : reverse	only the picture : reverse
			
Horizontal Line		Defective Block : A board	Defective Block : Panel or SD board *

* In case of 42inch models : For SU board and SD board and SC board,one SN board is used.

5.Troubleshooting for picture trouble

Summary of picture trouble

< Some part of screen : VT30 / GT30 / ST30 / UT30 series >

Symptom	Actual symptom	Defective board
Trouble at Upper or Lower half 		Over 46inch : SU / SD 42inch : SN
Horizontal line (Upper or Lower side) 		Over 46inch : SU / SD or panel 42inch : SN or panel
Trouble at Left or Center or Right part (46,42inch model : Left or Right half) 	Over 50inch  46/42 inch 	Over 50inch : C1-C3 46/42inch : C1,C2
Vertical line (Width is same as FPC) 		C or A or PDP panel
Vertical line (Width is narrower than FPC) 		PDP panel
Regular bar 		A

5.Troubleshooting for picture trouble

Diagnosis by Test Pattern

<Model>

VT30, GT30, ST30, UT30 series

<Symptom>

Picture Noise, Full Vertical Line, Abnormal color

<How to enter the Test Pattern>

1. Press the "**VOLUME -**" on the TV set and push "**i**" button of remote controller 3 times at the same time.
2. After this procedure, you can enter "Service Mode" and select "**AGING**", then "Test pattern" will appear.
3. Push "3" button of Remote Controller to select the test pattern mode to forward.
4. Push "4" button of Remote Controller to select the test pattern mode to reverse.

<Test Pattern (Normal)>

<Diagnosis>

How to diagnose by using test pattern

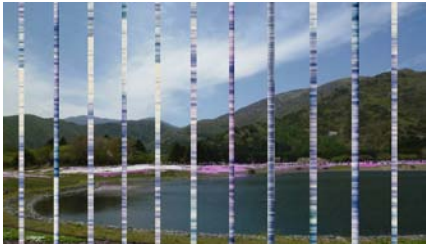

Abnormal picture
(Picture Noise, Full Vertical Line, Abnormal color)

Test pattern (1-23)	Defective Block (Board)
Abnormal	Panel Block (A Board or Panel)
Normal	Tuner Block (A Board)

7. Case Example of Picture Trouble

7.Case Example of Picture Trouble

[1] Model : 2011 model

[2] Symptom : Rainbow vertical bar

[3] Defective parts :

This symptom is very likely to be the A board defect for the previous model, but for 2011 model the Panel and C board defect is a high possibility.

[4] Summary :

If one of the Data Driver IC is defective and 3.3V go down, the other Data Driver ICs don't work correctly.
Because 3.3V is common for all Data Driver ICs.
(Vda line is isolated due to resistor being open.)

[5] Check point (Trouble shoot) :

Check by displaying some images.
If the position (length) of colorful bars change and there are some black bar blocks, the data driver IC is defective.
If there is no black bar block, check the connection of cables between A and C board.
If trouble still persists, the A board could be defective.

7.Case Example of Picture Trouble

[6] Detail Troubleshoot : Short check of the P3.3V line
